Computational Methods in Plasma Physics (Chapman & Hall/CRC Computational Science)

Stephen Jardin

Computational Methods in Plasma Physics (Chapman & Hall/CRC Computational Science) Stephen Jardin

Assuming no prior knowledge of plasma physics or numerical methods, **Computational Methods in Plasma Physics** covers the computational mathematics and techniques needed to simulate magnetically confined plasmas in modern magnetic fusion experiments and future magnetic fusion reactors. Largely self-contained, the text presents the basic concepts necessary for the numerical solution of partial differential equations.

Along with discussing numerical stability and accuracy, the author explores many of the algorithms used today in enough depth so that readers can analyze their stability, efficiency, and scaling properties. He focuses on mathematical models where the plasma is treated as a conducting fluid, since this is the most mature plasma model and most applicable to experiments. The book also emphasizes toroidal confinement geometries, particularly the tokamak—a very successful configuration for confining a high-temperature plasma. Many of the basic numerical techniques presented are also appropriate for equations encountered in a higher-dimensional phase space.

One of the most challenging research areas in modern science is to develop suitable algorithms that lead to stable and accurate solutions that can span relevant time and space scales. This book provides an excellent working knowledge of the algorithms used by the plasma physics community, helping readers on their way to more advanced study.

From reader reviews:

Augustine Klotz:

In this 21st millennium, people become competitive in each and every way. By being competitive now, people have to do something to make them survive, being in the middle of the actual crowded place and notice by means of surrounding. One thing that sometimes many people have underestimated it for a while is reading. That's why, by reading a publication your ability to survive boost then having chance to stand up than other is high. For you who want to start reading the book, we give you this Computational Methods in Plasma Physics (Chapman & Hall/CRC Computational Science) book as beginner and daily reading book. Why, because this book is usually more than just a book.

Melissa Gusman:

Playing with family in a park, coming to see the water world or hanging out with close friends is thing that usually you might have done when you have spare time, in that case why you don't try issue that really opposite from that. One activity that make you not experiencing tired but still relaxing, trilling like on roller coaster you already been ride on and with addition info. Even you love Computational Methods in Plasma Physics (Chapman & Hall/CRC Computational Science), you are able to enjoy both. It is good combination right, you still need to miss it? What kind of hang-out type is it? Oh can occur its mind hangout folks. What? Still don't obtain it, oh come on its called reading friends.

Chris McCree:

Computational Methods in Plasma Physics (Chapman & Hall/CRC Computational Science) can be one of your nice books that are good idea. All of us recommend that straight away because this reserve has good vocabulary that may increase your knowledge in language, easy to understand, bit entertaining but nevertheless delivering the information. The author giving his/her effort to set every word into pleasure arrangement in writing Computational Methods in Plasma Physics (Chapman & Hall/CRC Computational Science) although doesn't forget the main stage, giving the reader the hottest as well as based confirm resource info that maybe you can be certainly one of it. This great information may drawn you into fresh stage of crucial thinking.

Charles Towns:

A lot of reserve has printed but it differs. You can get it by net on social media. You can choose the very best book for you, science, witty, novel, or whatever simply by searching from it. It is called of book Computational Methods in Plasma Physics (Chapman & Hall/CRC Computational Science). You can add your knowledge by it. Without making the printed book, it might add your knowledge and make a person happier to read. It is most critical that, you must aware about book. It can bring you from one spot to other place.
