Model Railway Signalling C.J. Freezer

Why bother with signals? The answer is the subject of the model railway expert Cyril Freezer's in-depth look at the application of prototype signalling practice to the layout. Looking at both the traditional British semaphore and modern-day colour light multiple aspect signalling, he describes their history and function, how they can be scratchbuilt or assembled from kits and how they should be installed realistically on the model. With the help of photographs and many specially drawn diagrams, he also looks at the rudiments of the block system, how to make working block instruments and how to model signal boxes, lever frames, ground signals, banner repeaters and many other elements of this most fascinating subject. He also examines various applications of electronics, from a simple working signal lamp to more complex circuits for train control and detection. All too often ignored by modelers, model railway signalling is one of the most rewarding ways in which the operational potential of even the simplest of layouts can be immeasurably enhanced, and this book shows you how.
