Electron Correlation Dynamics in Atomic Collisions (Cambridge Monographs on Atomic, Molecular and Chemical Physics) J. H. McGuire

This graduate/research level text introduces the theory of multi-electron transitions in atomic, molecular and optical physics, emphasizing the emerging topic of dynamic electron correlation. The book begins with an overview of simple binomial probabilities, classical scattering theory, quantum scattering and correlation, followed by the theory of single electron transition probabilities. Multiple electron transition probabilities are then treated in detail. Various approaches to multiple electron transitions are covered including the independent electron approximation, useful statistical methods and perturbation expansions treating correlation in both weak and strong limits. The dynamics of electron correlation are strongly emphasized. The text contains a comprehensive summary of data for few and many-electron transitions in atoms and molecules, including transitions on different atomic centers, fast ion-atom and electron-atom interactions, and recent observations using synchrotron radiation. Emphasis is given to methods that may be used by nonspecialists.

James Brown:

Information is provisions for individuals to get better life, information today can get by anyone from everywhere. The information can be a understanding or any news even restricted. What people must be consider if those information which is within the former life are challenging to be find than now's taking seriously which one is acceptable to believe or which one often the resource are convinced. If you find the unstable resource then you buy it as your main information it will have huge disadvantage for you. All those possibilities will not happen within you if you take Electron Correlation Dynamics in Atomic Collisions (Cambridge Monographs on Atomic, Molecular and Chemical Physics) as the daily resource information.

Jill Weber:
