Geocology: An Evolutionary Approach

Richard Huggett

Geocology: An Evolutionary Approach Richard Huggett

Animals, plants and soils interact with one another, with the terrestrial spheres, and with the rest of the Cosmos. On land, this rich interaction creates landscape systems or geocosystems.

Geocology investigates the structure and function of geocosystems, their components and their environment. The author develops a simple dynamic systems model, the 'brash' equation, to form the conceptual framework for the book suggesting an 'ecological' and 'evolutionary' approach.

Exploring internal of 'ecological' interactions between geocosystems and their near-surface environments - the atmosphere, hydrosphere, toposphere, and lithosphere - and external influences, both geological and cosmic, *Geocology* presents geocosystems as dynamic entities constantly responding to changes within themselves and their surroundings.

An 'evolutionary' view emerges of geocological systems, and the animals, plants, and soils comprising them, providing a new way of thinking for the whole environmental complex and the rich web of interdependencies contained therein.
